# Class: INFX 543 A
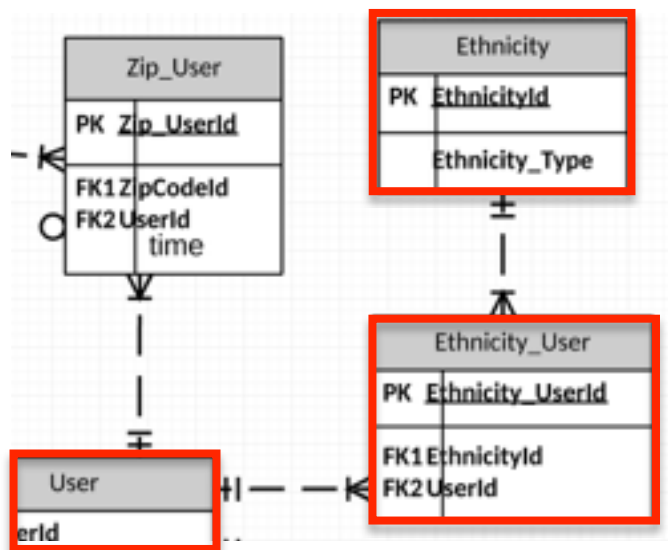

# Project Team 7: Pierre Augustamar, Jenny Mount, Tin-Chia Lin

# Database Topic: Personal Health Care System

**The changes made to the initial ERD:**

1. Ethnicity: Ethnicity and user should be in one to many relationship and we put an associated

    table to support it.

2. Zip-code: we should record "time" in to trace the history (in case our user may move)

3. Gender: one user should only be assigned to one gender, so there should be one to many

   relationship and we don't need an associated table here

4. Insurance: insurance and doctor should be in many to many relationship and an associated table

   should be added
